29 JAN 1964

MEMORANDUM FOR: Acting Director of Central Intelligence

SUBJECT: The DOD/JRC Reconnaissance  
Schedule for February 1964

1. Attached is the DOD/JRC reconnaissance schedule for February. This has been reviewed within the Agency, and it is recommended that it be given your approval.

2. In the January schedule the missions of primary interest to the Agency were the three [ ] missions scheduled to be flown north of Siberia. These were all flown with one producing excellent information and the other two reasonably helpful data. None is scheduled for February, but the Agency is planning with SAC to schedule similar missions at a later date, perhaps some in the Far East and against other emitters.

25X1A

3. The Agency is again particularly interested in the [ ] missions [ ] (Tab F) and [ ] (Tab G) each using two aircraft in the Baltic, as these should have a higher chance of intercepting SA-3 radiations than single flights. In general, the use of joint missions in all areas would seem justified on the basis of more complete coverage and the probability of greater Soviet reaction.

25X1A

4. Additional joint missions in this category are the [ ] mission 9106-2 (Tab A), which is coordinated with [ ] missions [ ] (Tab C), [ ] mission 9101 (Tab B), which is coordinated with [ ] [ ] missions [ ] (Tab D). All these are in the Barents/Norwegian Seas area.
